## Implemented by Parents And Carers Therapy Trial

Help us explore ways of improving speech and language for cochlear implanted children.

We're looking for parents/carers to join a trial exploring whether a parent training programme teaching communication and interaction skills in addition to the usual NHS care, can help cochlear implanted children develop better speech and language skills.

You may be eligible to take part if you are the parent/carer of a child under 5 years old and your child has been offered cochlear implants in both ears in the UK.

If you are interested in participating, please speak to your child's care team or contact us at:
